Hi Tahir,

In reference to – UPWatch DatasheetR1

We have reviewed the documentation and are happy to confirm that we have no issue with you retrofitting the UPWatch unit to our IQ push-around machines fitted with either **12V or 24V battery systems**.

Based on the information provided, we are satisfied that the proposed unit can be fitted to these machines and do not object to the retrofit.

Please ensure that the installation is completed in accordance with the UPWatch installation instructions and that any wiring or connections are suitable for the relevant 12V or 24V system.

For clarity, our approval is limited to the UPWatch unit's compatibility with our IQ machines and the battery configurations outlined above. Responsibility for the installation, setup and ongoing operation of the UPWatch system remains with the installer.

Should you require any further technical information from us to support the installation, please let me know.

Yours sincerely,

Paul Rogers
Product and Technical Director
